

# Year 2 – Science – Living Things– Spring 1

## Keeping Healthy

Vocabulary			
<b>life cycle</b>	the changes that an animal or plant passes through from the beginning of its life until its death.	<b>metamorphosis</b>	When a metamorphosis occurs, a person or thing develops and changes into something completely different.
<b>offspring</b>	A person's children or the young of an animal	<b>chrysalis</b>	A butterfly or moth in the stage between being a larva and an adult.
<b>basic needs</b>	Things that animals and humans need in order to live - water, food, air and shelter.	<b>growing</b>	Getting bigger because of natural growth.
<b>larva</b>	An insect at the stage of its life after it has developed from an egg and before it changes into its adult form.	<b>tadpole</b>	Small water creatures which grow into frogs or toads.
<b>frogspawn</b>	The eggs that frogs lay. This is where tadpoles develop.	<b>caterpillar</b>	A small animal that feeds on plants and eventually develops into a butterfly or moth.

### Heart

The heart is a muscle that pumps blood around the body.

### Muscles

Muscles help us to move. When you exercise your muscles can get stronger and more flexible.

### Lungs

Lungs bring air in and out of your body. They are the reason we can breathe.

## Life Cycles

### Frog

### Butterfly

## As we get older we grow and change:
